The new Leica S-Adapter L enables the use of S-lenses on the Leica SL

Wetzlar, 2 June 2016. The Leica S-Adapter L for the Leica SL mirrorless camera system is available from today. This adapter further expands the range of lenses that can be used with the Leica SL to include those of the Leica S medium format camera system.

The S-Adapter L now allows the use of altogether 16 Leica S-Lenses with focal lengths from 24 to 180 mm (including six lenses with central shutters) in addition to the system's own lenses, the Vario-Elmarit-SL 24–90 mm f/2.8–4 ASPH. and the Leica APO-Vario-Elmarit-SL 90–280 mm f/2.8-4. The exceptionally fast S-Lenses are a consequence of more than 100 years of experience and expertise in optical design and precision engineering that permits only minimal tolerances. They unite traditional Leica quality with cutting edge technology and achieve uncompromising imaging qualities in almost all possible situations in the studio and on location.

What's more, the exceptional compatibility of the Leica SL-System grants photographers access to almost all Leica lenses ever made. For instance, all Leica T lenses can be mounted on the Leica SL without an adapter, the already available M-Adapter T enables the use of almost all Leica M-Lenses with the Leica SL, while the R-Adapter L (available Q3/2016) will provide access to an entire range of Leica R-System lenses.

Another new addition to the range of accessories and equipment for the Leica SL camera system is the AA-SCL4 Audio Adapter available end of June.
