### Leica Q 'Khaki':

#### **New special edition with khaki-coloured leather trim, classic Leica script and proven camera features.**

**Wetzlar, 10 October 2018.** Leica Camera AG is now offering the Leica Q high-performance compact camera with a full-frame sensor and a fast prime lens as a limited special edition. Featuring premium real leather trim in khaki, the new camera stands out from the previously released classic models and sets a colourful highlight in the Leica Q family. The engraving of the classic Leica script on the top plate of this special edition is also filled in matching khaki. A carrying strap in the same colour underlines the stylish design of the silver camera body and lends the special edition a look reminiscent of the classic Leica M 'Safari' models.

The special edition of the Leica Q 'Khaki' is strictly limited to 495 examples for the world market and is available from today.

The technical specifications of the Leica Q 'Khaki' are identical to those of the standard model of the Leica Q. Thanks to its particularly fast Leica Summilux 28 mm f/1.7 ASPH. lens, the camera is perfect for photography in available light situations, for street photography, architecture and landscapes. To permit reliable control of subject composition, the Leica Q also features an integrated viewfinder with a resolution of 3.68 MP. Even the finest details of every exposure are displayed without any perceptible lag as soon as the camera is brought up to the user's eye.

All functions of the camera are clearly laid out and logically placed to guarantee perfect ergonomics. Its clear and logical menu concept provides rapid access to all essential functions and enables users to programme personalised settings.

The Leica Q also delivers video recordings in full-HD quality. Depending on the scene and subject, users can choose between 30 and 60 full frames per second for video recording in MP4 format. The camera also features an integrated Wi-Fi module for remote control and digital transfer of still pictures and video to a smartphone or a tablet with the Leica FOTOS App.
