

LEICA CINE 1

THE ART OF
HOME CINEMA.

INTEGRATION
SOLUTIONS

LEICA HOME CINEMA.

INNOVATION BASED ON TRADITION

The new Leica home cinema projectors continue the Leica legacy of captivating audiences through images. Leica's association with cinema dates back to 1914, when Oskar Barnack, Leitz's Chief Developer, established the 35 mm photo standard based on the emerging film format of the same size.

Leica introduced its first projector in 1926, and a few decades later, the renowned Leitz Pradovit projectors were produced in Germany.

This legacy lives on in modern home cinema projectors, which bring images to life with remarkable Leica quality, delivering that great home cinema feeling directly to living rooms everywhere. The swift advancement of modern audio-video systems, coupled with a growing aspiration to enhance the home cinema experience, is placing new demands on living spaces. This is where aesthetic design and cutting-edge technology come together.

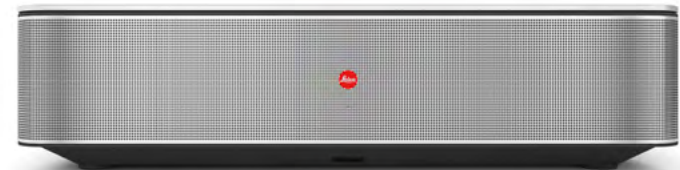

LEICA CINE 1.

TIMELESS DESIGN THAT SETS A HIGH STANDARD
FOR FORM AND FUNCTION

Home cinema designed for distinctive living spaces: the Leica Cine 1 fits seamlessly into every style of interior. Its sustainable, elegant aluminium housing that draws on Leica's typical minimalist design vocabulary offers a sophisticated, stripped-back touch. Behind this elegant exterior lies an ultra-short-throw laser projector and the Leica Summicron lens.

This powerful combination displays vibrant images with incomparable clarity in true Leica picture quality. A classic design object in any room, the Leica Cine 1 is a compact and efficient solution offering authentic Leica aesthetics and extraordinary functionality.

THE ART OF HOME CINEMA.

THE BIG SCREEN IN YOUR LIVING ROOM: THE LEICA CINEMA TV

Changing how we view films: The image, the sound, the atmosphere. These are the details that make a film truly great. Or turn a projection into a home cinema experience.

The Leica Cine 1 combines innovative technology and incredible craftsmanship with pure and iconic design to create a precision product that allows you to experience unique Leica quality in the moving image at sizes up to 120 inches.

The smart cinema TV boasts 4K resolution, crystal-clear Dolby Atmos® surround sound and Dolby Vision for intense depth of colour and sharp contrasts all the way out to the edges. Quality without compromise – down to the very last detail.

- 4k resolution
- Triple RGB laser
- Dolby Vision® and HDR10
- Leica Summicron lens
- Dolby Atmos® surround sound

MAKE ROOM FOR FEELINGS: BRILLIANT VISUAL WORLDS IN 4K

Energy-efficient, effective and easy on the eyes: The Leica Cine 1 offers depth of colour all the way out to the edges with Triple RGB laser technology, Leica Image Optimization (LIO™), a Leica Summicron lens and 4K resolution. Together with an impressive brightness of 3000 ANSI lumens, this creates nuanced, vibrant colours and sharp edges in a variety of ambient lighting conditions at image sizes up to 120 inches.

ALL-IN-ONE ENTERTAINMENT SYSTEM

The intuitive smart TV interface includes VIDAA voice control, a built-in triple tuner, Apple AirPlay and direct access to all TV services and streaming platforms – which means the Leica Cine 1 offers all the state-of-the-art functions of a modern smart TV and more. From TV and gaming to your personal film library, all the content you want to watch can be viewed in top quality.

ONE-OF-A-KIND IMAGE QUALITY

With the Triple RGB laser, LIO™ (Leica Image Optimization) and Leica Summicron lens, Leica quality can be experienced at image sizes of up to 120 inches.

SOUND THAT FILLS THE ROOM

The built-in Dolby Atmos® surround system rounds out the home cinema experience with sound that stands out. Together with the detailed image quality of the Leica Summicron lens, it creates an intense film-viewing experience.

PROJECTION THAT'S EASY ON THE EYES

Unlike televisions, the Leica Cine 1 projects light onto a screen, not straight into your eyes. This effectively reduces the amount of energy-intensive and particularly strenuous blue light and helps prevent eye strain.

SUSTAINABLE AND ENERGY-EFFICIENT

The innovative Triple RGB laser with separate light sources for red, green and blue light is maintenance-free, with a long service life of over 25,000 hours and lower energy consumption than conventional televisions of a similar size.

Kettner

THE KETTNAKER SOMA SERIES FOR LEICA.

DESIGN MEETS TECHNOLOGY – A STATEMENT FOR ANY SPACE

Modular media furniture designed for the demands of modern living. Three elements in perfect harmony – the body, built-in screen and Leica Cine 1 – combine to create a stylish whole. Soma Media unites technical sophistication with iconic

design, making high-end home cinema part of the furniture – a subtle piece with impressive performance. Soma's innovative magnetic changing system opens up endless possibilities for presentation – and makes change a constant.

INTERIOR DESIGN CONCEPTS: INNOVATION, INSPIRED BY TRADITION

Based in Dürmentingen, Swabia, the furniture manufacturer Kettnaker has been developing and producing furniture systems for 150 years. Like Leica, Kettnaker is all about one-of-a-kind craftsmanship. With a wide range of products and materials available, designers can use a system to make modern furniture to measure, creating something unique every single time.

These custom pieces offer extraordinary functionality and aesthetics and reflect the personality of those who own them, just like this bespoke concept furniture for the Leica Cine 1. Values and quality that combine high tech and craftsmanship, Leica and Kettnaker. A complementary combination when it comes to craftsmanship – a seamless visual symbiosis: Made in Germany.

POLTRONA FRAU.

FIDELIO MULTIMEDIA CABINET FOR CINE 1

A sideboard that perfectly combines design and technical excellence: This elegant piece of furniture has been specially designed for the ambitious Leica cinema TV Cine 1 – for those who set the highest standards for form and function.

While opening, the innovative drawer system automatically moves into the ideal position from the screen, which disappears elegantly into the back panel in stand-by mode. The motorised screen only appears when the Cine 1 is switched on – and subtly slips back in when switched off. This preserves the clean, sophisticated design of the sideboard at all times. A stylish cover protects the 100-inch screen when it is not needed.

The fronts of the drawers are made from high-quality birch plywood, finished with mocha-coloured ash veneer and covered with elegant Pelle Frau® Saddle Extra or Re-Saddle leather – which also covers the sides of the furniture. You can choose between elegant contrasting or tone-in-tone wire. A built-in cable duct helps create clean connections – easily accessible via a removable back panel. And the central feet under the two side drawers are made of solid, mocha-stained ash wood, highlighting the light and open design.

ITALIAN CRAFTSMANSHIP MEETS LEICA PRECISION TECHNOLOGY

Poltrona Frau has been a pioneer in Italian furniture manufacturing since 1912. The Residential Living division brings together artistic flair and master craftsmanship, using only the finest raw materials. The product of this passion is timeless furniture with a remarkable, unmistakable elegance – individual and with a universal appeal.

Entertainment systems have long played a starring role in the world of Poltrona Frau. Experience with custom-made furniture projects, particularly for the public sphere, represents a vital part of the company's expertise. It all began with the project business, where the company established itself by manufacturing the seating for auditoriums. Today this know-how extends to private living spaces.

In 2018, the renowned designer Roberto Lazzeroni created the Fidelio multimedia cabinet, bringing sophisticated functionality to living spaces and representing the ideal home entertainment centre for televisions and sound systems. The Leica Cine 1 built into the Fidelio multimedia cabinet offers an exclusive home cinema experience with outstanding cinema technology, extraordinary design and a unique ambience.

TECHNOLOGY MEETS AESTHETICS.

IN COLLABORATION WITH LEICA

With Lumina, the German design manufacturer Yomei is redefining modern living.

Yomei means “excellence” in Japanese – a standard that the company upholds through meticulous craftsmanship, inventive vision and enduring elegance.

Developed in exclusive collaboration with Leica – renowned for its German craftsmanship, optical precision and iconic design – this furniture piece for the Leica cinema TV Cine 1 transcends the traditional lowboard: Lumina makes a statement.

CONTACT

www.yomei.de

More information

STRIKING IMPACT, SEAMLESS INNOVATION

Lumina challenges the traditional television aesthetic, moving beyond the dark, inactive screen that typically dominates the space when not in use.

Instead, cutting-edge technology blends seamlessly with chic design: The integrated cinema TV, paired with a concealed screen, instantly transforms any space into an immersive experience. When not in use, technology takes a backseat, pushing refined elegance to the fore.

FOR ARCHITECTURE THAT TOUCHES US

This furniture piece has been designed so it can stand in the middle of the space – including in front of large windows. The Leica Cine 1 sits right at the heart of the system, embraced by the lowboard’s sculptural contours. The harmony between stability and lightness, accentuated by fluid curves, defines Lumina’s distinctive presence.

A cleverly designed flap mechanism makes cable management convenient and keeps things tidy.

DETAILS

NAME: Yomei Lumina furniture series

MODELS: for Leica Cine 1 | 100", 120"

DIMENSIONS: W/H/D 100" Version: approx. 260 cm x 45.5 cm x 70 cm

W/H/D 120" Version: approx. 306 cm x 45.5 cm x 72 cm

Both versions are also available in a high-rise design which is 85.5 cm tall.

COLOURS: taupe leather with powder-coated metal in bronze, anthracite microleather with powder-coated metal in black, white microleather with powder-coated metal in white

MATERIALS: Yomei leather, white microleather, powder-coated metal

SPECIAL FEATURES:

- Cine 1 in fixed position at optimum distance from screen
- Compatible with celexon automatic screen

AVAILABILITY:

The Yomei Lumina is available now from select specialist retailers in Germany, Switzerland and Austria. Throughout the year, it will be launched in additional European markets, and will be available in China and the United Arab Emirates on request.

THE FINEST MATERIALS

The innovative surface is covered with sustainable Yomei leather/microleather finished with a patented folding technique – for an extraordinary texture. The slightly rounded front and precision-manufactured flap that conceals the screen are inspired by the award-winning Yomei Magic Desk – and developed consistently from a technological perspective. The frame and sides are made from high-quality powder-coated metal – durable, elegant and manufactured with precision.

TWO HEIGHTS, INFINITE POSSIBILITIES

Lumina adapts to your needs:

- A low-rise version for relaxed lounging with depth.
- A high-rise version – ideal for stylish conference rooms, hotel lounges or watching TV in the comfort of your bedroom.

INDIVIDUAL FURNITURE SOLUTIONS.

TURN A ROOM INTO A FEELING WITH CINEMA TV

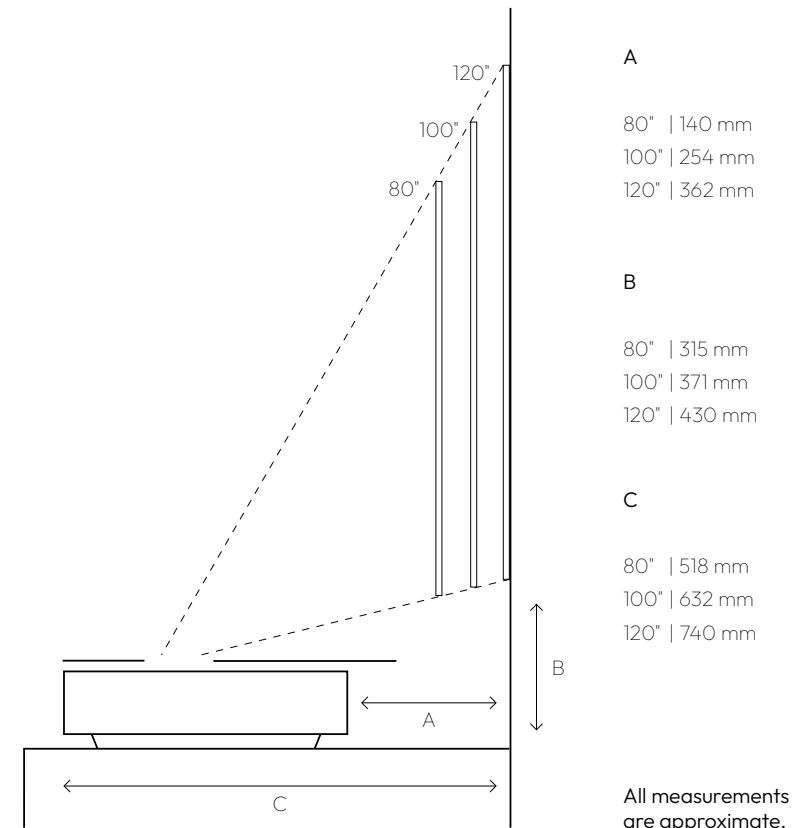

With the Leica Cine 1, you can turn any space into your own home cinema.
With the ultra-short-throw lens, the Leica Cine 1 is positioned close to the wall,
so it can be combined with the interior design in a compact and elegant way.

ELEGANT DESIGN THAT SETS A HIGH STANDARD FOR FORM AND FUNCTION

The sustainable, elegant aluminium housing of the Leica Cine 1, guided by Leica's typical ambitiously minimalist design vocabulary, offers a sophisticated, stripped-back touch. Behind this elegant exterior lies a powerful ultra-short-throw laser projector and the precise Leica Summicron lens. This unbeatable combination offers vibrant images with incomparable clarity in true Leica picture quality.

SEAMLESS INTEGRATION

Opt for custom-made furniture solutions from one of our partners or the cabinetmaker of your choice. Your own personal style and design preferences know no bounds.

DESIGNED FOR LEICA BY NISI MAGNONI: TECHNOLOGY MEETS AESTHETICS

With his custom-made home integration for the Leica Cine 1, renowned Italian architect and designer Nisi Magnoni has created a timeless statement. Combined with the motorised 120 inch celexon screen, it creates a perfect symbiosis of form and function. The ensemble not only epitomises an elevated lifestyle – it turns every room into a veritable cinema experience, with no compromises. A vision that inspires – and sets new standards.

SPACE OPTIMISATION

The Cine 1 can be positioned close to the wall thanks to its modern ultra-short-throw laser technology. Combined with the compact designs of individual furniture solutions, this frees up precious wall and floor space and does away with bulky TV stands or conventional large displays.

DESIGN FREEDOM

The motorised projection screens from Leica partner celexon can be subtly built into furniture, making them invisible in stand-by mode until they lift up and into view when the Cine 1 is switched on.

CUSTOM SCREEN SOLUTIONS FOR OPTIMUM HOME CINEMA EXPERIENCES

For unique cinema experiences in your own living room, you can choose between motorised pull-up screens or a screen that is permanently installed on your wall. For the best possible projection, we recommend Leica's own permanently installed high-contrast wall screens specially designed for the Leica Cine 1, complete with ALR function (Ambient Light Rejection). The ALR function ensures disturbing ambient light is blocked out and projected light is directed preferentially towards the viewer – for an even more intense film experience. Those who prefer more flexibility can opt for motorised celexon roll-up screens for short-throw projectors. These screens are particularly well-suited to installation in furniture and are only visible when used.

SMART IDEAS FOR BIG SCREEN IMAGES

For over 20 years, celexon AV products have epitomised high quality and functionality. As a leading European home cinema and presentation technology manufacturer, celexon offers a wide range of AV accessories.

Numerous locations across Europe and collaboration with many retail stores ensure reliable availability and a wide selection of screen solutions for almost every purpose in residential and commercial spaces.
